### 2007 Seed Harvest Synopsis

\* I love working with plants!  
\* I love playing with seeds!  
\* There is a thrill and a sense of accomplishment in collecting and cleaning seeds down to the final product. Seeds are beautiful and diverse. The seed of every species is distinct, even within genera.  
\* In 2007 I collected and cleaned out 23.5 pounds of seeds from 30 species of medicinal plants - many millions of seeds! Some years I harvest more seed, some years I do less. 2007 was average. Generally I harvest seed from around 30 to 70 plant species per year. Usually divided between cultivated medicinals and native plants.  
\* In 2007 I did not harvest seed from many native plants. Almost all of the 2007 seed harvest was from my Riversong herb farm near Hood River, Oregon.
